PRODUCT DESCRIPTION

NITREX 241PF

Our Nitrex 241PF **cut level F** (equiv cut level 5) gloves offer wearers the ultimate protection against workplace injury from cuts, tears, punctures, and abrasions.

Conforming to the highest European standards (**EN 388 Level F**), the medium weight nylon, HPPE, and dual-core steel construction of these level F cut resistant gloves will withstand greater than or equal to 30N of pressure; making them our **most durable gloves** against the sharp objects, abrasive materials, and tearing hazards in your workplace.

Manufactured with the **most challenging of tasks** in mind, our Nitrex 241PF cut level F cut resistant gloves are ideally suited to applications in metalworking, plastics, glazing, metal fabrication, and more.

Despite their durable and hard-wearing construction and **full glove cut protection (including the back and cuff of the glove)**, our Nitrex 241PF gloves do not compromise on comfort or dexterity. Featuring a seamless 13 gauge, close-fitting, **breathable liner**, these gloves offer **superior comfort**. At the same time, their heavy duty construction and PU palm coating means reduced wear and tear and enhanced dry grip for maximum dexterity.

The hand-like moulding and seamless construction of our Nitrex 241PF gloves mean **reduced hand fatigue**, and enhanced comfort for wearers, even during extended use; making these some of the **most comfortable and**

robust cut resistant gloves available.

The Nitrex 241PF is available in blue/black in sizes S, M, L, and XL.
