## PRODUCT DESCRIPTION

### NITREX 340RFI

Our Nitrex 340RFI **cut resistant gloves** feature **protective bumpers** which help to reduce injury by **blunting the force of bumps and crushes**. They also provide excellent **resistance to abrasions** and tears, as well as **cut resistance** to deliver great protection in hazardous and unpredictable environments. So, for workers handling tools to drilling assembly and site preparation, you can rest assured that their hands are protected.

Our Nitrex Cut Resistant Gloves range has been designed to protect workers' hands against threats from **sharp objects**, such as those posed by sharp blades, plate glass, or heavy metal stamping. **Featuring cut level C** (equiv cut resistance level 5) resistance, Nitrex 340RFI gloves will stand up to some of the more extreme cutting threats and have been tested to withstand up to 15 Newtons of pressure from sharp objects under the **EN388** European standard.

Cut hazards are not the only consideration when selecting the appropriate glove for your application. Our Nitrex 340RFI cut level C gloves also feature a range of other protective properties. These include **excellent abrasion resistance**, **a unique palm padding to protect the hand against knocks when using the heel of the hand and TPE (thermoplastic elastomer) protection on the back of the hand and fingertips**. Acting like an absorbing rubber barrier, the TPE section of the glove helps absorb knocks and bumps on the back of the hand and fingers and **protects against pinching**.

Another of the protective properties featured in our Nitrex 340RFI gloves is our **NitreGrip® Technology**, which is an advanced surface treatment that provides an **assured grip** when working in dry, wet, or oily conditions. Reducing the need for a forced grip, the technology assists in reducing hand fatigue and in ensuring materials and

products are protected even in challenging conditions.

The seamless, cut resistant glove is **breathable**, provides abrasion protection and offers excellent comfort and dexterity. Of course, it's hard to stay cool when the going gets tough, but these work gloves feature an HPPE liner that allows the hands to breathe and with no irritating seams, ensures they're fantastically comfortable throughout the day. To further enhance tear and abrasion resistance, Nitrex 340RFI Cut Resistant Gloves also feature a sandy nitrile palm coating that is resistant to oils and grease and acts as a physical barrier.

For additional comfort and safety, the gloves also feature an **adjustable fastening on the wrist**. This offers a more secure fit, whilst the **reinforced thumb crotch** provides enhanced protection when handling ropes and other abrasive materials, as well as increasing the life of the glove.

The Nitrex 340RFI is available in black/grey/yellow in sizes XL.
