PRODUCT DESCRIPTION

NITREX 370WOR

Our Nitrex **370WOR Thermal Work Gloves** combine the renowned comfort and flexibility of Unigloves nitrile range with **excellent thermal protective properties**, for the ideal thermal protective gloves for both **hot** and **cold conditions**. Offering the highest level of **abrasion protection (tested to EN388 standard)**, as well as **heat resistance up to 100°C**, these premium thermal gloves are also extremely flexible, allowing for **freedom of movement** even in challenging conditions. Able to withstand a minimum of **5 Newtons force from a cutting blade**, these gloves also offer a higher level of cut resistance than most general handling gloves and are therefore suitable for a wide range of tasks in your workplace.

The nylon and spandex liner and acrylic terry-brushed inner of our Nitrex 370WOR thermal work gloves are **incredibly comfortable**, helping to reduce fatigue and maintain quality control even after long hours of use. The **ultrathin foam nitrile coating** and insulative construction means these thermal **water-resistant work gloves** provide not only thermal protection, but also effective dry grip and excellent grip in wet and oily conditions. Additionally, the ultrathin nitrile coating and elasticated non-slip wrist assist in making these gloves even more wearable, by allowing for form-fitting comfort to keep out the cold, whilst being highly water-resistant below the cuff. What's more, these hi vis work gloves offer **enhanced visibility** for added safety, making the Nitrex

370WOR the superior choice for hand protection in hot or cold conditions, even in the wet or with limited visibility.

The Nitrex 370WOR is available in orange in sizes S, M, L, XL and XXL.
