PRODUCT DESCRIPTION

UNIGLOVES SALIVA EJECTORS

With the Unigloves saliva ejector, liquids such as water, smaller abrasion particles and saliva can be ideally aspirated during dental treatments with the protective cap in place. The suction of larger pieces of material or

abrasive particles can also be carried out in the same way by removing the protective cap. The flexible plastic can be shaped to the desired form with the integrated metal wire. The ventilated protective cap prevents the suction from sticking to the oral mucosa. Our saliva ejectors are also available in a wide range of colours.
